

COMPETITIVE ANALYSIS

Strateteach

ALGO770 · Crypto + Multi-Asset Algorithmic Trading

Where We Stand vs. the Market

A feature and cost benchmark of Strateteach against the top 20 market-leading algo-trading, bot & automation platforms.

PREPARED FOR

The Owners & Partners

DATE

July 2026

STATUS

Confidential — Internal

Our features & pricing verified from the ALGO770 codebase; competitor data verified on vendor sites, July 2026.

01 EXECUTIVE SUMMARY

Strateteach (ALGO770) is a crypto + multi-asset algorithmic-trading web app that bundles an automated, breakout-driven Profit Engine, TradingView signal automation, five pre-built AutoPilot strategies (with newly-enabled, tightly-guarded live execution on Bybit), a system-wide daily scanner, a backtesting engine and risk-free demo trading — wrapped in a bilingual (Hebrew/English) installable web app with a built-in owner/operator console. This report benchmarks its full feature set and intended pricing against 20 market-leading platforms.

The competitor set spans crypto trading-bots (3Commas, Cryptohopper, Pionex, Bitsgap, TradeSanta, Cornix, WunderTrading, Mizar), no-code / automation builders (Capitalise.ai, Coinrule, Kryll), power-user platforms (HaasOnline, Gunbot, Altrady), US stock & AI tools (Trade Ideas, TrendSpider, Tickeron, Composer, StockHero) and social/copy trading (eToro). All competitor pricing and features were verified on the vendors' own sites in July 2026; where a vendor renders prices only in JavaScript or behind a login, the figure is flagged as approximate or "not published."

Headline takeaways

- **Price position.** At an intended **\$10 / \$29.99 / \$99.99 per month** (plus a one-time **\$500** Profit-Engine unlock), Strateteach's entry tier is among the cheapest paid tiers in the entire set — below 3Commas (\$20), TradeSanta (\$25), Bitsgap (\$29) and Cornix (\$33), and a fraction of the US stock-AI tools (Trade Ideas \$89-189, StockHero \$50-160). Our top tier (\$99.99) also undercuts most rivals' "pro" tiers.
- **Competitive on the essentials.** We match the field on signal/TradingView automation, backtesting, paper trading and multi-asset data, and we are **distinctive** on native multi-channel alerts (SMS + WhatsApp), a daily breakout scanner shown to *all* tiers with no exchange connection, and a built-in owners/governance layer that none of the 20 competitors ship.
- **Clear feature gaps.** Unlike most crypto-bot rivals we have **no grid or DCA bots**, **no copy/social trading**, **no native mobile apps** (we ship a PWA), **fewer connected exchanges** (3 live vs. 11-30+), and **no genuine AI/ML** — our "AI" and "machine-learning" labels are UX/marketing over rule-based strategies, whereas Trade Ideas (Holly), Tickeron, TrendSpider and Composer ship real ML/LLM features.
- **Honesty flags for the owners.** (a) AutoPilot backtest results are honestly attributed to an external "Trend Radar" source and are **not yet independently reproduced in our own engine**; (b) pricing is finalized in code but **billing is pre-launch** — Stripe is unconfigured and checkout is disabled, with prices shown as "preview"; (c) live AutoPilot execution is Bybit-only, spot, long-only, capped \$10-250, behind a master gate, a 3-step confirmation and a kill-switch.
- **Strategic read.** Strateteach competes as an **affordable, guided, multi-asset 'signals + strategies + guardrails'** platform with an owner/operator cockpit — not as a grid-bot farm. The pricing headroom is real; the highest-leverage moves before launch are (i) independently validating AutoPilot results in-engine, (ii) switching billing on, and (iii) deciding whether to add grid/DCA and copy-trading to close the most visible gaps.

At-a-glance scorecard

Top strengths	Key gaps	Pricing position
• Cheapest entry tier in the set (\$10/mo) • Native SMS / WhatsApp alerts • System-wide daily scanner — all tiers • Multi-asset data + TradingView charts • Guard-railed live AutoPilots • Built-in owners / admin console • Bilingual HE / EN (RTL)	• No grid / DCA bots • No copy / social trading • No native mobile apps (PWA only) • No genuine AI / ML (labels only) • 3 live exchanges (vs 11-30+) • AutoPilot results not yet self-validated • Billing pre-launch (no Stripe)	• \$10 / \$29.99 / \$99.99 + \$500 unlock • Undercuts most paid rivals • Top tier below most 'pro' tiers • No free tier yet (most leaders have one) • No annual discount yet (rivals 20-33%) • One-time unlock model is unusual

02 OUR FEATURE CATALOG

Every capability below was confirmed in the ALGO770 codebase (React/TypeScript dashboard + FastAPI Python backend). Each line states what the feature does today.

A · Trading & Automation

Profit Engine	Turns the daily breakout scan into a sized, take-profit-tagged trade plan you approve order-by-order (live or demo); the headline P&L is portfolio growth vs. net deposited capital.
Bot-8 daily breakout scan	Automatic 00:05 UTC scan of ~120 top crypto pairs (CCXT) that surfaces the day's top-10 breakouts feeding the Profit Engine (strategy "BOT(8C)-770").
Signal Bot	TradingView (or any) webhook → automated live orders; per-user bots with server-stored, Fernet-encrypted, trade-only API keys; hard global cap of 10 bots per user.
AutoPilots (×5)	Pre-built strategies — Channel Hedger, Trend Surfer, Bull & Bear, Steady Climber, Stock Trender — run as daily dry-run simulations, with optional real-money live execution on Bybit.
AutoPilot safeguards	Live trading sits behind a master env gate, a 3-step "GO LIVE" confirmation, a \$10-250 first-run per-trade cap, a one-click kill-switch, Bybit-only (spot, long-only) and a full audit trail.

B · Research & Testing

Daily market scanner	System-wide top-10 breakouts plus a 3-color trend model, shown to all tiers with no exchange connection required.
Backtesting engine	TradingView-matching backtests (CAGR, win-rate, max drawdown), CSV/XLSX export, and Pine-Script paste to add a strategy (Middle & Pro).
Demo / paper trading	Risk-free virtual sessions with live-price P&L every 8s, stop-loss, multiple parallel sessions, and an admin-facing demo leaderboard.

C · Market Data & Charts

Multi-asset data	Crypto via CCXT (5-exchange fallback: Binance / Gate.io / KuCoin / Binance.US / Kraken) plus stocks, metals & commodities via yfinance.
TradingView charts	Embedded advanced real-time charts displayed alongside our own engine's signals.

D · Alerts & Communication

Multi-channel alerts	Native SMS + WhatsApp (Twilio, live) plus Telegram and Email (SMTP, built but dormant); per-event opt-ins for breakout, take-profit, stop-loss, bot-trade and digest.
-----------------------------	---

E · Experience & Platform

Skins & accessibility	Four brand palettes × light/dark (8 themes) plus large-text and high-contrast modes.
Bilingual UI	Hebrew (primary, right-to-left) and English with full internationalization across every screen.
PWA (installable)	Service worker with an auto-update banner enabling install prompts (full PWA manifest still pending).

Exchange connect	Binance / Bybit / Coinbase for manual trading & signal bots; Bybit for live AutoPilots; non-custodial browser-stored keys for manual trading.
-------------------------	---

F · Governance & Operations

Owners portal	Daily / Overview / Progress / Results dashboards plus a PM board, voting, team/employees and legal/IT/biz/finance panels (named owners only).
Admin dashboard	Live connected-users, audit log, user management, demo leaderboard and broadcast messaging.
Maintenance gating	Backend-enforced 503 for non-admins during maintenance; owners and admins bypass.

G · Plans & Monetization

Tiered plans	Basic / Middle / Pro subscriptions plus a one-time \$500 Profit-Engine unlock and additive credit packs (Stripe-scaffolded, pre-launch).
“AI” labels (honest note)	The “AI agent” onboarding and “machine-learning” strategy copy are UX/marketing; the engine is rule-based (Gaussian-channel) — there is no LLM or ML model in the backend.

03 COMPETITIVE LANDSCAPE — THE TOP 20

Twenty market-leading platforms, grouped by primary category. “Pricing from” shows the lowest paid entry point (or model) — full tiers are in the pricing table in Section 05.

Platform	Category	Specialty & notable capabilities	Pricing from
3Commas	Crypto bots	Multi-bot cloud suite — DCA, grid & signal bots, SmartTrade terminal, backtesting and an AI “QuantPilot” builder; 23 exchanges; new stocks/DEX.	\$20/mo
Cryptohopper	Crypto bots	Veteran platform — Strategy Designer (no-code), DCA, copy/social marketplace, arbitrage & AI “Algorithm Intelligence” (Hero); 11 exchanges.	Free / \$24+
Pionex	Exchange + bots	Exchange with 16 free built-in bots (grid, DCA, arbitrage) and AI grid; liquidity from Binance/HTX. Bots free — pay only the 0.05% fee.	Free (fee)
Bitsgap	Crypto bots	Grid / DCA / futures bots + smart-order terminal + AI assistant across 17 exchanges; backtesting; demo trading.	\$29/mo
TradeSanta	Crypto bots	Beginner-friendly DCA & grid bots (long/short), TradingView signals, futures on the top tier; 9 exchanges.	\$25/mo
Capitalise.ai	No-code	Plain-English (NLP) strategy automation across crypto, stocks & CFD brokers; backtest, paper, TV webhooks. Kraken-owned.	Free*
Coinrule	No-code	If-this-then-that rule builder, 200+ templates, AI optimizations and a copy marketplace; crypto + stocks (Alpaca).	Free / \$30
Kryll (KryllOS)	No-code	Free, open-source, self-hosted visual block builder with AI “vibecoding” and backtesting; Binance & Hyperliquid.	Free (OSS)
WunderTrading	Crypto bots	TradingView-signal automation, DCA/grid bots, copy trading and multi-exchange mirroring; 20 exchanges.	Free / \$5+
Mizar	Social / copy	Subscription-free copy trading + DCA bots on a profit-share model; non-custodial; 11 exchanges.	Free (fee)
Trade Ideas	Stock / AI	Real-time AI stock scanning — “Holly” generates trade ideas, OddsMaker backtester, broker execution (IBKR/E*TRADE). Stocks only.	\$89/mo
TrendSpider	Stock / AI	Automated multi-timeframe charting, no-code backtesting & bots, AI Strategy Lab + “Sidekick” LLM; stocks/futures/forex/options/crypto via 30+ brokers.	~\$39/mo
Tickeron	Stock / AI	AI “robots” (signal / virtual / brokerage agents) and pattern/trend ML engines; stocks/ETF/crypto/forex; execution via Alpaca.	~\$5/mo
Composer	Stock / AI	No-code “symphony” strategy baskets + AI generation + backtest, run in a built-in brokerage; stocks/ETF/crypto. SoFi-owned.	Free / \$40
StockHero	Stock / AI	Rules-based stock bots (grid/DCA/scalp), Strategy Designer, marketplace, TradingView and paper trading; 14 brokers.	\$49.99/mo
HaasOnline	Pro / advanced	Power-user crypto automation via HaasScript; grid (WaveRunner), backtesting, signal manager; 24 exchanges; self-host option.	\$16.79/mo
Gunbot	Pro / advanced	Self-hosted, one-time-license crypto bot; large grid strategy library, DeFi and TradingView (DeFi plan); 19+ exchanges.	€44 once
Altrady	Pro / advanced	Multi-exchange terminal + grid/signal/DCA bots, Base/TA scanners, paper trading and MCP AI; 17 exchanges.	€28/mo
Cornix	Crypto bots	Telegram-first signal / DCA / grid / TradingView bot marketplace; copy expert signals; demo & backtest; 11 exchanges.	\$32.99/mo
eToro	Social / copy	Social multi-asset brokerage — CopyTrader mirrors real traders, Smart Portfolios; stocks/ETF/crypto/CFD; free \$100k demo.	Spread/comm

* Capitalise.ai: no published paid tiers — free via partner brokers; acquired by Kraken (2025), new sign-ups paused. Shrimpy, a former portfolio-rebalancing leader, is excluded: its consumer platform was shut down after the 2023 Bitcoin IRA acquisition; Cornix takes the 20th slot as an active, market-leading replacement.

04 FEATURE COMPARISON MATRIX

eToro	✗	✗	✗	✗	✗	✓	🟡	✓	✓	✓	self*	🟡	✓

Notes. Genuine AI/ML = a trained model or LLM assistant with real function (not marketing labels) — Strateteach's "AI"/"ML" copy sits over rule-based strategies, so it is scored ✗. Stocks / assets+ = supports equities and/or other asset classes beyond crypto. Conn. exch. = connected exchanges/brokers; self* = the platform is itself the broker/exchange; brk* = via partner brokers; Strateteach = 3 live-trading exchanges + 5 for market data. Multi-channel alerts ✓ = native SMS/WhatsApp; 🟡 = in-app/email/Telegram (typical; breadth not audited per vendor). Judgment calls reflect a best-effort reading of vendor materials, July 2026.

05 PRICING COMPARISON

Published prices in USD/month unless noted (€ = vendor bills in euro). “Entry / Mid / Top” are the lowest, a representative middle, and the highest standard tier. Verified on vendor sites, July 2026.

Platform	Model	Free tier	Entry	Mid	Top	Notes
Strateteach	Subscription (pre-launch)	Demo only	\$10	\$29.99	\$99.99	+ one-time \$500 Profit-Engine unlock & credit packs. Billing not yet live — Stripe unconfigured, checkout disabled, prices shown as preview.
3Commas	Subscription	Trial 7-day	\$20	\$50	\$140	Annual ~25% off (\$15/\$40/\$110). Spot-only on Starter; futures from Pro; Custom by sales.
Cryptohopper	Subscription	Yes (Pioneer)	\$24.16	\$57.50	\$107.50	Explorer/Adventurer/Hero, billed annually (monthly rates higher; page JS-rendered). Copy-Bot \$9.99-99.99/mo add-on.
Pionex	Free bots + fee	Yes	—	—	—	No subscription; all bots free. Cost = 0.05% spot / 0.02-0.05% futures trading fee. Pionex is itself the exchange.
Bitsgap	Subscription	Yes (demo)	\$29	\$69	\$149	Annual ~20% off (\$23/\$55/\$119). Free plan = demo bots only. 7-day Pro trial, no card.
TradeSanta	Subscription	Trial 3-day	\$25	\$45	\$90	Annual billing ~\$18/\$32/\$45/mo. Futures bots only on Maximum.
Capitalise.ai	Free (via brokers)	Yes	—	—	—	No published paid tiers — free through partner brokers. Kraken-owned; new sign-ups paused, folding into Kraken Pro.
Coinrule	Subscription	Yes (Starter)	\$29.99	\$59.99	\$749	Starter free (2 rules). Investor/Trader/Fund; Enterprise by sales. TradingView from Trader tier.
Kryll (KryllOS)	Free / open-source	Yes	—	—	—	KryllOS is free, self-hosted, no fees. Optional marketplace strategies priced in KRL token. (Legacy cloud used pay-per-use.)
WunderTrading	Subscription	Yes (Free)	\$4.95	\$19.95	\$89.95	Free/Starter/Basic/Pro/Premium; up to ~25% off annual. 7-day Pro trial. Premium free when trading on Hyperliquid.
Mizar	Volume fee (no sub)	Yes (PAYG)	—	\$15-200	\$30-200	Pay-as-you-go 0.1% of volume; Trader/Pro charge a min-max monthly volume fee. Copy trading = profit share, no fixed fee.
Trade Ideas	Subscription	Limited free	\$89	\$189	—	Standard \$89 / Premium \$189 per mo billed annually (monthly ~\$127/\$228). Holly AI & backtesting only on Premium. Stocks only.
TrendSpider	Subscription	Paid trial	~\$39	~\$65	~\$87-399	Standard/Premium/Enhanced/Advanced (approx.; annual-billed; page JS-rendered). Sidekick AI \$49-349/mo; futures/options data extra.
Tickeron	Subscription / modular	14-day trial	~\$5	~\$45	~\$125	Daily Signals ~\$5 / AI Robots Standard ~\$45 / Unlimited ~\$125 (annual promo; login-walled). Crypto bundle ~\$35/mo.
Composer	Subscription	Yes (backtest)	—	—	\$40	Build & backtest free; automated trading “Trading Pass” \$40/mo (\$32 annual). Composer is the broker. 14-day trial.
StockHero	Subscription	Signup + trial	\$49.99	\$99.99	\$159.99	Lite/Premium/Professional (annual ~17% off). 14-day trial. SMS/WhatsApp & grid bot on Professional.

Platform	Model	Free tier	Entry	Mid	Top	Notes
HaasOnline	Subscription	Trial 7-day	\$16.79	\$41.99	\$125.99	Starter/Standard/Pro/Enterprise (annual ~16% off). Pay by card or BTC. HaasScript power-user platform.
Gunbot	One-time license	No	€44	€112	€187	Lifetime license (Spring-2026 promo; reg. €199/€299/€499). Self-hosted. Backtesting on Pro+; DeFi/webhooks/sim on DeFi plan.
Altrady	Subscription	Limited free	€28	€50	€90	Basic/Essential/Premium (annual ~30% off: €20/€35/€63). 5-day trial; 30-day money-back. Scanner/Backtesting Pro add-ons.
Cornix	Subscription	14-day trial	\$32.99	\$52.99	\$146.9	Advanced/Premium (33% off annual); Asset Manager from \$99.9; Community Admin from \$146.9. Demo + trial, no card.
eToro	Spread / commission	Yes (\$100k demo)	\$0*	—	—	No subscription. \$0 stock/ETF commission (US); crypto ~1%; CFD spreads; \$5 withdrawal. CopyTrader/Smart Portfolios no extra fee.

* eToro entry = \$0 subscription (revenue via spreads/commissions). “self” models (Pionex, Composer, eToro) are their own broker/exchange. Approximate (~) figures are where the vendor renders pricing in JavaScript or behind a login, or runs a promotion; these are flagged rather than fabricated.

06 COST-VS-VALUE ANALYSIS

Entry-price ladder (lowest paid tier)

Platform	Entry \$/mo	Platform	Entry \$/mo
WunderTrading	\$4.95	Bitsgap	\$29
Tickeron	~\$5	Coinrule	\$29.99
Strateteach	\$10	Cornix	\$32.99
HaasOnline	\$16.79	Composer	\$40 (auto)
3Commas	\$20	StockHero	\$49.99
Cryptohopper	\$24.16	Trade Ideas	\$89
TradeSanta	\$25	TrendSpider	~\$39
Altrady	€28	Free/usage	Pionex, Kryll, Mizar, eToro

Where we're cheaper / richer — and where the gaps are

- **Cheaper on entry.** Our \$10 Basic sits near the very bottom of the paid field — roughly a third of the crypto-bot median (~\$25–30) and far below the US stock-AI tools. For \$10 a user already gets the daily scanner, one live strategy, five bots and full demo trading — access that costs \$20–\$29 on 3Commas or Bitsgap (which, however, add grid/DCA bots we lack).
- **Cheaper at the top.** Our \$99.99 Pro undercuts most “pro” tiers — Bitsgap Pro \$149, TradeSanta Maximum \$90, Coinrule Trader \$59.99 (Fund leaps to \$749), StockHero Professional \$159.99, Trade Ideas Premium \$189 — while still including the full scanner, backtesting and the Profit Engine (with a \$20k run cap lifted by the one-time unlock).
- **Richer where it counts for us.** Native SMS + WhatsApp alerts, a system-wide daily scanner shown to every tier with no API connection, unified multi-asset data (crypto + stocks + metals + commodities), a bilingual RTL UI, and a built-in owners/admin cockpit are things no competitor bundles at any price.
- **Price-point opportunities.** (1) Add a genuine **free tier** — most leaders (Cryptohopper, Coinrule, WunderTrading, Bitsgap, Composer) use one as an acquisition funnel; we currently gate everything behind paid plans. (2) Offer an **annual discount** — rivals give 17–33% off; we offer none yet. (3) Decide how to frame the unusual **one-time \$500 unlock**: a differentiator for buyers who dislike subscriptions, but potentially a friction point at sign-up.
- **Gaps that cap our pricing power.** The absence of grid/DCA bots, copy/social trading, native mobile apps and real AI — plus a single main live exchange (Bybit) — limits willingness-to-pay against feature-dense rivals. Closing even one or two of these (grid/DCA and copy-trading are the most visible) would materially strengthen the \$30 and \$100 tiers.

07 OUR DIFFERENTIATORS & HONEST GAPS

Where Strateteach wins

- **Guard-railed live automation.** A master env gate, a 3-step “GO LIVE” confirmation, a \$10–250 first-run per-trade cap, a kill-switch, Bybit-only spot/long-only execution and a full audit trail — an unusually conservative safety posture for retail automation.
- **Daily breakout scanner for everyone.** The system-wide top-10 breakout scan is shown to all tiers with no exchange connection, delivering value from the first login — before any keys or funds.
- **Native multi-channel alerts.** SMS + WhatsApp (Twilio) alongside Telegram and email; most rivals stop at in-app, email or Telegram.
- **Unified multi-asset data + charts.** Crypto, stocks, metals and commodities in one place with embedded TradingView charts.
- **Built-in owner/operator cockpit.** Owners portal, PM board + voting, admin console, live user monitoring, audit log and maintenance gating — a product-and-business layer none of the 20 competitors ship.
- **Bilingual Hebrew/English (RTL).** A first-class Hebrew experience serves an underserved market segment.
- **Affordable, transparent pricing** plus a one-time Profit-Engine unlock, and non-custodial, trade-only keys with withdrawals-disabled guidance.

Honest gaps & risks (for internal eyes)

- **AutoPilot performance is not yet self-validated.** The five strategies’ KPIs are source-attributed to an external “Trend Radar” backtest and are explicitly not reproduced in our own engine; performance must be independently validated in-engine before it is marketed.
- **Billing is pre-launch.** Prices are finalized in code, but Stripe is unconfigured and checkout is disabled — no revenue can be collected until keys and price IDs are wired.
- **No grid/DCA bots and no copy/social trading** — the two most common capabilities across the crypto-bot field.
- **No native mobile apps.** We ship a PWA (installable service worker); the full manifest is still pending, and most rivals have iOS/Android apps.
- **“AI/ML” is marketing, not model.** The engine is rule-based (Gaussian-channel); over-claiming AI is a reputational risk when rivals ship genuine ML/LLM features.
- **Live execution is concentrated on Bybit** (spot, long-only), and only 3 exchanges are connected for live trading vs. 11–30+ elsewhere; the email channel is dormant and WhatsApp needs production approval.
- **Regulatory/compliance** exposure of offering live trading automation was out of scope for this analysis and should be reviewed separately.
